

Daniel Maree Fungi

Fungi are found in damp dark places

They are found there because they need wet and rotting things to feed on.

Lambert Gully is a good place for fungi to grow because it has wet and rotting things. If fungi is in the sun it will not grow properly and shrivel up. The best time to find fungi is in autumn after its rained.

Fungi does a very important job in the Lambert Gully eco system. It breaks down rotting plants and animals to make the soil healthier for growing plants.
