

Eddie

Come and see fungi in Mount Nelson and see the life in a rotten log too! Look at some fungi at our trail at Mount Nelson Tasmania.

Fungi is a funny species of its own. It is not a plant or an animal. It grows in damp places. The main types of fungi are the Agarics and the Poly pores.

Small cap fungi is very small but when it gets bigger it is as big as your finger. It is some times brown. It has a white stem.
