

Yvette Anne Mary Cross

Fungi are non plants or animals. One place to find fungi is at Mt Nelson in Lambert Gully Tasmania. They grow in damp places.

Fungi have no chlorophyll they are non-animals and non-plants. Fungi have their own species with mushrooms and toadstools. Some types of fungi are the Agarics and Polypores and Puffballs.

Small cap fungi look small and colourful. Some fungi are brown, white, black and creamy. Small cap fungi's cap looks triangular with gills. Polypores have tubes and the Agarics have gills.

Fungi also grows in Lambert
