

Brodie

When a tree falls down it gets animals all over it and becomes a rotting log. It is like an animal festival because lots of insects like a rotting log. It is found in Lambert Gully and bushy places because a rotting log starts off as a tree and a tree grows in bushy places.

Its special job is to keep plants and animals healthy and safe because its somewhere to live and eat.

Brodie Life in a Rotting Log

Did you know that a rotting log has lots of things happening to it? In Lambert Gully we discovered lots of things. You can find things like interesting fungi or rotting logs. The 3 main tree types in Lambert Gully are Eucalyptus Globulus, Viminalis and pulchella.

On the outside of a rotting log it does not look that interesting, but on the inside there is all sorts of things going on. You can see it is actually brown inside. It also has lots of little insects that might even be microscopic.
